

Transform Spaces with Countertops from LG Surfaces

Peoria, AZ – LG Surfaces, a subsidiary of the global LG powerhouse known for its innovative and quality products, proudly announces their partnership in Sysco’s National iCare program. LG Surfaces encompasses a wide variety of Solid Surface, Stone, and Eco surfacing products ideal for restaurant dining rooms, tabletops, bathrooms, bars, lounge areas, serving stations, lobbies or just about anywhere your imagination takes you. LG Surfaces is excited to start offering its dynamic and highly-functional countertop products through the Sysco iCare program.

LG Surfaces are durable enough to withstand heavy usage. They’re easy to clean, hygienic, stain-resistant, and backed by a 15-year transferrable warranty. All LG Surfaces meet the demanding health and safety regulations for surfaces used in commercial foodservice applications, including restaurants, hospitality and commercial kitchens. Each is non-porous, making the surface impermeable to bacteria, fungal growth and food particles. These surfaces are GREENGUARD certified ensuring they meet independently developed standards for indoor air quality and low pollutant emissions.

LG Surfaces also carry the NSF Mark for a safe food preparation surface. When Sysco iCare customers choose any of LG’s surfacing products for their foodservice establishment, they are providing the highest level of health and environmental assurance to their patrons.

LG Surfaces has a national distribution and certified fabricator installer network providing Sysco iCare customers with a “turn-key” solution for countertop ordering, fabrication, and installation. This extensive national scope also ensures local marketing and sales support for Sysco operating companies.

To launch this special partnership along with specific program elements, including how Sysco iCare customers can get a FREE on-site design consultation, LG Surfaces will host iCare University sessions for Sysco Operating Companies beginning September 25th, 2009.
